

TODO

1. Download, verify and mount image *Lab3.E01*
2. Analyze partition table - partition 1.
Where does it start, how big is it, what FS, what OS formatted the drive?
Any other metadata?
3. Your job is to find password for perpetrators keychain stored in text file.
4. Document everything about all files on the FS and build timeline.
5. Which files do you suspect might contain sensitive information?
6. Were the files modified or tampered in any way?
7. Is there a way for you to find the information anyways?
