TODO

1. Prepare virtualisation environment (eg. VirtualBox)
2. Download latest SIFT ".ova" image
3. Prepare forensic environment
4. Get yourself some (small capacity) USB stick for next week tasks
5. Practice assigning USB device to VM, instead of Windows
6. Using SIFT, figure out some information about you USB
   a. Manufacturer
   b. Capacity
   c. Partition table
7. Create "usb_info.txt" file on SIFT workstation with as much information about the key as possible (without data itself)
8. Get this file out of VM (ssh or file sharing)
9. Make a digital copy of your log with all the steps taken
10. Hand in "usb_info.txt" and PDF of JPEG file with your log. (AIS).
